Throughout this document, “Solana Dinero” will be referred to as SOLDN to avoid confusion with Solana (SOL), the blockchain it runs on.

Introduction and Overview

- **Supply:** 2 Trillion, 50%+ Liquidated
- **Launched:** AUG-11-25
- **Mint:** CNgouAHnb7iuY3LC2DGtkpPobVSeKYbhcSNaSCv5ShmP
- **Pool Mint:** CxwBwuE6dGKFti7AeLW8Dx7W4411t8moeCsTp4rbpmCP
- **Trade Fee:** Flat 1%, even during high congestion
- **Main Focus:** Maximize reinvesting to the pool
 - Friday Buy Day, buy every Friday since Sept 26, 2025
 - 0.5% of all buy volume reinvested to liquidity pool
- **2 Decimals:** Like most money, SOLDN 45.65 others 0.000004565

Solana Dinero (abbreviated as **SOLDN**) is a minimalist crypto token built on the Solana blockchain. SOLDN is designed for slow, steady growth—not explosive hype. We launched on **August 11, 2025**, with a simple premise: to **consistently maximize reinvesting to our liquidity pool**.

We have ultra low costs and invest the majority of our LP profits back to the pool to help raise the price floor over time. Also, every Friday since Sept 26, 2025 we have Friday Buy Day, and invest at least \$1 to the pool

Through The Facade

First, we must address the sad truth about crypto. Most crypto tokens are non utility meme coins, and have an average lifespan of 12 days. This is closer to betting than investing. Even crypto projects that claim to do something are completely overstated or unnecessary.

Most crypto projects that do something only have value within an ecosystem, so unless that ecosystem has consistent growth, the rewards and price will slowly burn out over time. Outside of Proof of Stake blockchains, like Solana, staking is unsustainable or inflationary. Even projects with constant airdrops eventually see a time where everyone sells to the pool and the value dies.

Payment processors like Visa and Mastercard are much better for handling the necessary high volumes required to run wide scale transactions. For example, Visa regularly handles over a million transactions per minute, where Ethereum barely hits a thousand. 😞 That's Bad! We'll see how fast Ethereum's level 2 works if it comes out.

Solana is the only blockchain able to handle transaction speeds close to Visa, and is cheap. However, payment systems are currently set up to have no cost to the spender, which will always be a better system for spending and growth. Solana may handle a fair amount of future money transactions, but is unlikely to overtake current payment processing companies like Visa and Mastercard.

Crypto is primarily made for **decentralized and low cost investing**, which is unsurprisingly where they outshine just about everything else. Even Bitcoin pretty much has no other function than decentralized investing, its transaction speed is around 300 per minute. Without certain useful crypto projects like Lightning Network, which allows Bitcoin to be spent, Bitcoin is basically useless. Regardless, the only thing that gives value to any crypto is **How Many People Want to Buy It**.

How Crypto Projects Make Money

Like any asset, the only thing that gives a crypto value is people wanting to buy it. Purchases are also how crypto projects make money. Whenever someone buys a crypto, the Liquidity Provider, (LP), receives money from the fees charged. This fee can be anywhere from 0.2% of the transaction to 10% of the total buy volume! The LP will likely receive anywhere from $\frac{1}{2}$ to $\frac{3}{4}$ of that fee (about 0.2%-8% of the total buy volume), the rest goes to the DEX and Solana validating.

In most Crypto projects LP rewards are either taken as profit, like memecoins on pump.fun, or used to cover costs. For example, if a token gives staking or rewards, they have to pay every time anyone receives any amount of staking or rewards. This cost can add up very quickly and

requires large pools of money to be tied up to cover costs to keep smart contracts running. Even implementing smart contracts requires large upfront costs in most circumstances.

All of these things reduce profit margins, and unless a project has actual utility(which is rare), it's all irrelevant. **Crypto value only goes up when people buy it because of the value added to the liquidity pool.**

Our Philosophy

●Simplicity and consistency ●

-\$OLDN has virtually no costs so we can maximize reinvesting profits to our liquidity pool.

-Money doesn't have to be complicated and misunderstood. The only thing that grows the value of any asset or investment is whether or not people are buying it.

-We create buys every Friday during Friday Buy Day as well as reinvest the majority of our profits back to the pool, this simulates how corporations raise stock value by using profits for stock buy backs.

-What gives a crypto a specific value is how much money it's pooled against. For example, if 5 tokens are pooled against \$20, each token is worth \$4. Now if someone buys a token for \$4, there will be 4 tokens left in the pool against \$24, raising the price to \$6 a token. We reinvest LP profits and create buys every Friday to raise the \$OLDN to Solana ratio.

-SOLDN doesn't pretend to do anything to create hype. It isn't a governance token, it doesn't offer staking rewards, it doesn't promise utility. These features often introduce complexity, cost, and decay. Instead, SOLDN is built to be simple, transparent, and low-maintenance—so it can quietly compound over time as opposed to burning out.

Supply and Structure

- **Supply:** 2 Trillion, 50%+ Liquidated
- **Mint:** CNgouAHnb7iuY3LC2DGtkpPobVSeKYbhcSNaSCv5ShmP
- **Pool Mint:** CxwBwuE6dGKFti7AeLW8Dx7W4411t8moeCsTp4rbpmCP
- **Main Focus:** Maximize reinvesting to the pool
 - Friday Buy Day, buy every Friday since Sept 26, 2025
 - 0.5% of all buy volume reinvested once threshold of 1k buy volume per day, equates to a \$5 buy or deposit daily from LP profits
- **2 Decimals:** Like most money, SOLDN 45.65 others 0.000004565

Launch Details

- **Launch Date:** August 11, 2025
- **Initial Pool Ratio:** 0.045 SOL per 1 trillion SOLDN

This ratio was chosen to allow maximum room for growth. Virtually all of \$SOLDN's value will come through organic growth and ritual buys. **When you start at the bottom you can only go up!**

Transaction Fees and Pool Reinvestment

- **Flat 1% Fee:** On all transactions, even during high congestion
- **Reinvestment Mechanism:** 0.5% of all SOLDN buy volume (from LP profits) is reinvested into the pool once a daily threshold of \$1k buy value is hit
- The 0.5% Reinvestment will be balanced between SOLDN buys and deposits. This allows for the amount of Solana to rise in the pool while keeping the SOLDN the same, raising the price floor over time.

Our 1% fee is constant regardless of traffic, and allows trade fees to remain low and have a significant amount to reinvest back to the pool to grow it over time.

Because SOLDN has ultra low maintenance costs from having no team, no smart contract utility, no transaction fees from airdrops, we're able to reinvest most of our LP profits back to the pool, this will only raise the price floor for SOLDN over time.

Friday Buy Days

Every Friday since September 26, 2025, we perform a ritual: **Friday Buyday**.

We invest at least **\$1 worth of SOL** into the SOLDN pool. We also balance this with depositing that money back to the pool to keep the majority of the tokens in circulation.

It's a rhythm, to keep the ticker moving and the pool growing even if it's slow at times. We will post our streak every week to our social media platforms, primarily our X @solanadinero and Reddit r/solanadinero.

Join us and invest \$1 every Friday!

As the project grows, Friday Buyday may scale. But the spirit remains: slow, steady, and transparent.

Simplicity as Strength

SOLDN is powered by minimalism: WE JUST REINVEST

- No Costs
- No Team
- No Treasury

- No Fancy Jargon
- No sell pressure
- No maintenance
- No distractions

Just a token, a pool, and a ritual. That's it. And Friday Buy Day

Contact Us

The best way to contact us is through our email hola@solanadinero.com
We're [@solanadinero](#) on all of our socials, but are primarily active on
Twitter, Reddit, and Telegram. Our site is solanadinero.com

Closing Thoughts

Solana Dinero \$SOLDN isn't trying to be everything. It's just simple, transparent, and a quietly resilient investment option. It seeks to do what's necessary and nothing else.

We're okay just chilling, we'll be here whenever you're ready

The Poolkeeper's Pledge

- 1.) I don't have a team. I don't have a treasury. I don't sell from the pool.
- 2.) If SOLDN grows, the pool grows. If the pool grows, I buy more.
- 3.) All LP profits beyond what I need will be reinvested in the pool
- 4.) Every Friday, I invest, the streak continues, the pool grows.
- 5.) This isn't a promise of price. It's a ritual of stewardship.
- 6.) I am the only Poolkeeper. I chill. It compounds.
