Throughout this document, “Solana Dinero” will be referred to as SOLDN to avoid confusion with Solana (SOL), the blockchain it runs on.

Introduction

- Supply: 2 Trillion
- Launched: AUG-11-25
- Mint: CNgouAHnb7iuY3LC2DGtkpPobVSeKYbhcSNaSCv5ShmP
- Main Focus, to maximize reinvesting to the pool

Solana Dinero (abbreviated as **SOLDN**) is a minimalist crypto asset built on Solana, designed for slow, steady growth—not explosive hype. We launched on **August 11, 2025**, with a simple premise: to consistently reinvest to the pool

We have ultra low costs and invest the majority of our LP profits back to the pool to help raise the price floor over time. Also, every Friday since Sept 19, 2025 we have Friday Buy Day, and invest at least \$1 from our personal funds to the pool

Through The Facade

First, we must address the sad truth about crypto, most applications are completely overstated. Most crypto only has value within an ecosystem, so unless that ecosystem has consistent growth, the rewards and price will slowly burn out over time. Outside of Proof of Stake blockchains, like Solana, staking is unsustainable or inflationary.

Payment processors like Visa and Mastercard are much better for handling the necessary high transaction volumes required to be wide scale. For example, Visa regularly handles over a million transactions per second, where Ethereum barely hits a thousand. 😞 That's Bad! **Solana** is the only blockchain able to handle transaction speeds close to Visa, and is cheap. However, payment systems are currently set up to have no cost to the spender, which will always be better for spending and growth.

Crypto is primarily made for **decentralized and low cost investing**, which is unsurprisingly where they outshine just about everything else. Even Bitcoin pretty much has no other function, and without certain useful crypto projects like Lightning Network, allowing Bitcoin to be spent, Bitcoin is basically useless. Regardless, the only thing that gives value to any crypto is **How Many People Want to Buy It**.

How Crypto Projects Grows

Like any asset, the only thing that gives a crypto value is people wanting to buy it. Purchases are also how crypto projects make money. Whenever someone buys a crypto, the Liquidity Provider, (LP), receives money from the fees charged. This can be anywhere from 0.2% of the transaction to 10% of the total buy volume! The LP will likely receive anywhere from $\frac{1}{2}$ to $\frac{3}{4}$ of that fee.

In most Crypto projects this is either taken as profit, like on pump.fun, or used to cover costs. For example, if a token gives staking or rewards, they have to pay every time anyone receives any amount of staking or rewards. This cost can add up very quickly and requires large pools of money to be tied up to cover costs to keep smart contracts running. Even implementing smart contracts requires large upfront costs in most circumstances. Whenever buy orders slow down, so too do rewards and staking long term.

Philosophy

● **Simplicity and consistency** ●

-**\$SOLDN** has virtually no costs to maximize reinvestment.

-Money doesn't have to be complicated and misunderstood. The only thing that grows the value of any asset or investment is whether or not people are buying it.

-What gives a crypto a specific value is how much money it's pooled against. For example, if 5 tokens are pooled against \$20, each token is worth \$4. Now if someone buys a token for \$4, there will be 4 tokens left in the pool against \$24, raising the price to \$6 a token. **We reinvest LP profits and create buys every Friday to raise the \$SOLDN to Solana ratio.**

-SOLDN doesn't pretend to do anything to create hype. It isn't a governance token, it doesn't offer staking rewards, it doesn't promise utility. These features often introduce complexity, cost, and decay. Instead, SOLDN is built to be simple, transparent, and low-maintenance—so it can quietly compound over time as opposed to burning out.

Supply and Structure

- **Total Supply:** 2 trillion SOLDN (fixed, non-mintable)
- **Decimals:** 2 (to reflect real-world money and avoid mental gymnastics)
- 1% flat fee on all transactions.
- Majority of LP profits reinvested back to the pool.
- No Smart Contracts, No Staff, No Overhead

We chose 2 decimals intentionally. Unlike tokens with 18 decimals and quadrillion supplies, SOLDN is designed to be graspable, relatable, and grounded.

Launch Details

- **Launch Date:** August 11, 2025
- **Initial Pool Ratio:** 0.045 SOL per 1 trillion SOLDN

This ratio was chosen to allow maximum room for growth. SOLDN isn't trying to “moon”—it's trying to rise consistently and sustainably.

Transaction Fees and Pool Reinvestment

- **Flat Fee:** 1% on all transactions
- **Reinvestment Mechanism:** 0.5% of all buy volume (from LP profits) is reinvested into the pool
- We balance this with deposits to always keep over half the tokens out of the mint wallet.

Our 1% fee is constant regardless of traffic, and allows trade fees to remain low and have a significant amount to reinvest back to the pool to grow it over time.

Because SOLDN has ultra low maintenance costs from having no team, no smart contract utility, no transaction fees from airdrops, we're able to reinvest most of our LP profits back to the pool, this will only raise the price floor for SOLDN over time. The buys for this come directly from the LP wallet

Friday Buy Days

Every Friday since September 19, 2025, we perform a ritual: **Friday Buyday**.

We invest at least **\$1 worth of SOL** from personal funds into the SOLDN pool from a dedicated wallet. We also deposit that money back to the pool to keep the majority of the tokens out in circulation.

It's a rhythm, to keep the ticker moving and the pool growing even if it's slow at times. We will post our streak every week to our social media platforms, primarily our X [@solanadinero](#) and Reddit [r/solanadinero](#).

Join us and invest \$1 every Friday!

As the project grows, Friday Buyday may scale. But the spirit remains: slow, steady, and transparent.

Simplicity as Strength

SOLDN is powered by minimalism:

- No team
- No treasury
- No sell pressure
- No roadmap
- No promises

Just a token, a pool, and a ritual. That's it.

Contact Us

The best way to contact us is through our email hola@solanadinero.com
We're [@solanadinero](#) on all of our socials, but are primarily active on
Twitter, Reddit, and Telegram. Our site is solanadinero.com

Closing Thoughts

SOLDN isn't trying to be everything. It's trying to be *something* simple, transparent, and quietly resilient. If it grows, it grows. If it doesn't, it still stands as a clean experiment in crypto minimalism.

We're okay just chilling.

The Poolkeeper's Pledge

- 1.) I don't have a team. I don't have a treasury. I don't sell from the pool.
- 2.) If SOLDN grows, the pool grows. If the pool grows, I buy more.
- 3.) All LP profits beyond what I need will be reinvested in the pool
- 4.) Every Friday, I invest, the streak continues, the pool grows.
- 5.) This isn't a promise of price. It's a ritual of stewardship.
- 6.) I am the only Poolkeeper. I chill. It compounds. **I will keep it going.**
