

## Solana Dinero \$SOLDN Whitepages

**Solana Dinero (\$SOLDN)** is a meme-experiment in compounding. We started at the bottom and are slowly burning out.

\*This document refers to Solana Dinero as SOLDN and Solana as Solana to avoid confusion

## Technicals

- **Born:** August 11, 2025 Orca
- **Relaunched:** Nov 10, 2025 Raydium
- **Supply:** 2 trillion (non-mintable)
- **Decimals:** 2
- **Mint:** CNgouAHnb7iuY3LC2DGtkpPobVSeKYbhcSNaSCv5ShmP
- **Fire Sale Fridays:** our slow burn strategy starting 11/11/2025

## What We Do

We plan to be the slowest burning token on Solana, and aggressively reinvest(as possible with a crypto). This means we keep most of our LP rewards in the pool to compound. In addition we buy \$1 worth of SOLDN every Friday, then burn those tokens forever. This is a meme level low amount, and not likely to cause significant inflation but can give us the tag of the slowest burn on Solana.

## History

SOLDN was born on **August 11, 2025**, as a test to crypto minimalism. Can we build something from nothing? We didn't launch on a meme platform like pump.fun or moonshot, with a large liquidity, a presale hype, and plan to use \$0 for marketing. We launched quietly with **1 trillion tokens** against **0.029 SOL** on **Orca**, using just **0.045 SOL total** (including pool fees).

That original Orca pool ran quietly until **November 7, 2025**. On **November 10, 2025**, we repooled on **Raydium** with 1.4 trillion soldn against 0.21sol. This gave us better indexing and more visibility. We then burned ¼ of SOLDN supply in from our mint wallet with a slow \$1 burn every Friday.

We maintain no staff and are set to run with next to no overhead, this should allow Solana Dinero \$SOLDN to run almost indefinitely.

**Fire Sale Friday**, starting November 14, 2025 we began buying and burning \$1 worth of SOLDN from the pool each week on Friday. This is set to replace the Friday Buy Day we did for 7 weeks from September 26 - November 7 buying \$1 each Friday. The \$1 is set to be a meme level low 'slowest burn on solana' rate while also testing the true power of compounding.

Updated Nov 11, 2025. **Disclaimer:** Solana Dinero \$SOLDN is a meme token for entertainment purposes and there is no guarantee of profit or growth. We reserve the right to end Fire Sale Fridays on solana dinero at any time. Official site [solanadinero.com](https://solanadinero.com)

Before the Raydium launch, our metadata was updated, frozen, and the files were deleted. SOLDN is now immutable, and has always been non-mintable.

## Future Goals

If Solana Dinero SOLDN gains a decently large amount of liquidity we will burn our lp token, this will end us receiving any lp rewards. All lp rewards will then go directly to compounding within the pool.

Another bonus for burning our lp token is added security. This will make it impossible for anyone to access or withdraw from the pool, keeping it immutable and on the Solana blockchain forever.

## Our Store

We maintain a storefront at [store.solanadinero.com](https://store.solanadinero.com). Our products are completely customizable, if you aren't able to create what you want please reach out or email us at [hola@solanadinero.com](mailto:hola@solanadinero.com) and we will try to make it for you. Our products are print on demand through a third party vendor and thus not returnable. If a product is defective we will make it right!

## Why Solana?

- **Solana**
  - ~65,000 theoretical TPS; ~2,000–5,000 real-world TPS
  - Average fee: ~\$0.00025 per transaction
  - Energy use: ~0.0027 kWh per transaction (extremely low)
- **Ethereum (Layer 1)**
  - ~15–30 TPS
  - Fees range from ~\$1 to \$50+ during congestion
  - Energy use: ~0.03 kWh per transaction (post-merge, now Proof-of-Stake)
- **Bitcoin**
- ~7 TPS
- Fees vary from ~\$0.50 to \$5+ depending on mempool congestion
- Energy use: ~707 kWh per transaction (Proof-of-Work)
- Mining is increasingly centralized—top 5 pools control over 70% of hash rate

Solana is faster, cheaper, and greener—perfect for tokens like SOLDN that rely on frequent, low-cost compounding.
